

Fusible Link / Circuit Breaker

What does a Fusible Link / Circuit Breaker do?

A Fusible Link / Circuit Breaker is designed to protect the vehicle's electrical system in the event of a high surge. If the threshold current is reached, the internal fuse melts to break the circuit and prevent damage to the fuse box.

Manufactured to Withstand Real-World Condition

Polycarbon protective casing to protect the fuses

FH164
Ford (2014-11)
968K VIO

ABS plastic construction provides extra durability

Copper terminals with anti-corrosive coating

FH153
Nissan
VIO Over 910,000

FH154
Nissan
VIO Over 810,000

FH158
Toyota
VIO Over 400,000

FH62
Ford
VIO Over 960,000

When the OE fails, look for BWD®

Our BWD® replacement is a perfect match to the OE part in fit, form, and function.

! What are the common causes of failure?

The main cause of premature failure is due to excessive heat from the engine. Corrosion from the battery terminals can also cause premature failure.

Will faulty Fusible Links / Circuit Breakers illuminate the check engine light?

Yes, a failing Fusible Link / Circuit Breaker can illuminate the MIL with DTCs: P0230, P025A or P0627.

How do you determine if the Fusible Link / Circuit Breaker is malfunctioning?

- Engine Does Not Start
- Sudden Engine Stalls
- Battery light remains ON
- Various electrical equipment failure (window switches, wipers, power steering, etc.)

Where are these Fusible Links / Circuit Breakers located?

- They are typically mounted on the battery post
