

UNIQUELY BUILT TO LIVE LONGER.

The stock spring of a fuel filter housing can weaken, resulting in a drop in pressure that can damage the injector. TechSmart's Fuel Pressure Regulator Upgrade Kit raises fuel pressure to protect fuel injectors, ensuring they continue to function at optimal performance for a very long time. It's one more way we evolve our parts to live longer.

TechSmart® "Blue Spring" Fuel Pressure Regulator Upgrade Kit

- Raises fuel pressure 10-15 psi
- Prevents long-term injector damage
- Maximizes injector performance
- Increases injector life
- Kit includes everything needed to rebuild the fuel filter housing

The Evolution of Parts

Tortoises can live for more than 150 years.
