

ABLE TO HANDLE EXTREME TEMPERATURES.

Excess heat created by today's high-intensity bulbs can take a toll on headlight harness connectors. That's why TechSmart® upgraded our "plug & play" High-Temperature Headlight Harnesses with a ceramic connector designed to withstand heat and protect against damage. So it's not just smart. It's a survivor.

Camels store water and fatty food in their humps which helps them tolerate extremely high temperatures.

TechSmart® High-Temperature Headlight Harness

- Upgraded high-temp ceramic connector design
- 14-gauge wire for better conductivity
- Complete harness – "plug & play" right in between the factory harness and new bulb
- Can be used as a pigtail if the original connector is melted
- Upgrade the harness when upgrading the bulb
