

# MADE THICKER FOR TOUGHNESS.

Twice as thick as  
the competition

## Ditto.

When OE steering column shift tubes break at vulnerable stress points, the result is a labor-intensive repair, so you need a replacement that will last. TechSmart® Shift Tubes are twice as thick as the competition at the highest stress point, making them the stronger, longer-lasting choice. There's something to be said for a thick skin.

Rhinoceroses have the thickest skin of any terrestrial mammal. The skin on their backs and flanks can be 1 inch thick.

## TechSmart® Steering Column Shift Tubes

- High-quality direct-fit replacement for failed original
- Meticulously engineered for toughness
- 3.2 mm at the highest stress point, twice as thick as the competition
