

THINK TECHSMART® FIRST

Thermostat Housing Assembly

BMW Cars & SUVs 2006-99

VIO over 1.1 Million

TechSmart® aluminum construction replaces the weak OE plastic design to prevent leaks.

TechSmart® includes a coolant level sensor, thermostat and gasket unlike the competition.

Over time the OE plastic design can leak at the seams. The plastic housing can easily be damaged during an unrelated repair or a radiator hose removal.

Z63001

Expansion Tank Service Kit

S49002

TechSmart® introduces a proven quality solution for the BMW expansion tank system issue. The OE tank can fail over time, leaking coolant and increasing the risk of over-heating. The thermostat located on the oil cooler is often damaged while removing the expansion tank. TechSmart® Expansion Tank Service Kits provide the expansion tank, automatic transmission oil cooler thermostat and coolant level sensor to restore the vehicle's cooling system functions. Auto Trans Oil Cooler Thermostat is also available separately (B49001).

BMW 2006-00

VIO .5 Million

Everything needed to do the job right in one box—includes tank, oil cooler thermostat, and coolant level sensor!
